Global Xpress

High Speed Internet For the High Seas

YachtProjects International with our partners **Intellian** and **Inmarsat** are now offering global high speed Internet for Yachts and Ships. With the roll out of the **Global Xpress** Network of Ka Satellites, we can now offer **16Mbps** downlink and **4Mbps** uplink on a 60cm antenna.

The Inmarsat satellites operate with a combination of fixed narrow spot beams that enable Inmarsat to deliver higher speeds through more compact terminals, plus steerable beams so additional capacity can be directed in real-time to where it's needed.

Inmarsat's GX service represents a clear path to finally achieving the same level of connectivity offshore as you have at home or in the office.

The **YachtProjects International, Inmarsat** and **Intellian** partnership ensures a smooth, easy transition for vessel operators from legacy services to this next generation capability. One network, one provider with continuous global coverage.

From the easily upgradable v100GX to the compact GX60, Intellian's full line of GX-ready products features simple, intuitive, graphically-based antenna remote control software, which includes features such as remote management, support and control from anywhere in the world, and one touch commissioning.
